Education

Wilfrid Laurier University — Sept. 2024 – Present
Honours BSc in Computer Science — *Waterloo, ON*

Cardinal Leger Secondary School — Sept. 2020 – June 2024
Ontario Scholar, Honour Roll, French Immersion — *Brampton, ON*

Projects

Stackd | *React, TypeScript, Zustand, Tailwind CSS*

- Built a browser-based paper-trading app where users trade stocks, ETFs, and crypto with practice money, set limit orders and recurring buys, and watch the prices move live every few seconds on screen.
- Wrote a market simulation that generates five years of price history for each asset from a seed, so every chart is identical on each visit and rebuilt the performance chart by replaying a single transaction log against those prices.

Mitra | *React, Leaflet, Node.js/Express, SQL Server*

- Built a full-stack web app that connects students with shared interests by showing nearby users on a Leaflet map, using the browser's geolocation to place each person on it in the right spot.
- Wrote an Express and SQL Server backend that stores the user profiles and coordinates, using parameterized queries throughout so the database stays safe from SQL injection on every request.

OMEN | *Python, NLP & Language-Model APIs*

- Built a Punjabi-to-English lyrics generator on NLP and language-model APIs, cleaning and normalizing messy, inconsistent user text before it was ever passed along to the model to be processed.
- Used prompt engineering to keep the output steady, and parsed the responses into a repeatable result so the tool behaved the same way even as the input people gave it kept changing between runs.

HawkMaps | *React Native, Expo, TypeScript, Python/FastAPI (team)*

- Built a Laurier campus app with a team, using React Native and Expo for the app and a Python FastAPI backend, with map, events, study-space, and AI-assistant tabs behind a Laurier-email login.
- Helped build GoldenHawk, an AI assistant that answers campus questions through an LLM backend (Claude or Groq) and falls back to an on-device engine when the backend is down, so the chat still works offline.
- Worked on the on-device engine that grounds answers in real campus data, resolving rooms to buildings, finding the fastest indoor route with Dijkstra's algorithm, and reporting live open or closed status.

HarvestAI | *Python, DeepSeek LLM, GeoPandas, Tkinter*

- Built a Python app that recommends nitrate fertilizer mix and amount by combining simulated IoT soil-sensor readings with government soil data and regional climate information for a location.
- Wrote a geospatial parser with GeoPandas and Shapely that matches a location to the right Canada Land Inventory soil dataset and pulls its capability class and limitations for that exact spot.
- Fed that soil context into a DeepSeek language model through an OpenAI-compatible API to generate the recommendation, and showed the sensor data and results in a Tkinter GUI with Matplotlib graphs.

Experience

Finance Tracker Developer — Feb. 2026 – Present
Waterloo Rocketry Club – Business Team — *Waterloo, ON*

- Built a Google Apps Script system on a Google Form that automates purchase reimbursements: on each submission it reads the answers, chooses a reimbursement or direct-charge path, and fills and emails the paperwork on its own.
- For a reimbursement, it generates a claim number, fills a University of Waterloo expense-claim template, exports it to PDF, converts and merges the uploaded receipts into one file, and emails the package to the student and finance.
- Wrote a student-info lookup that pulls details from a master sheet and adds new students back to it, a daily cleanup that clears uploads after two weeks, and full maintenance and handoff documentation for the next owner.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C
Frameworks: React, React Native, Expo, Node.js & Express, FastAPI, Google Apps Script
AI & Data: LLM APIs (OpenAI, DeepSeek, Claude, Groq), prompt engineering, GeoPandas, Pandas, Matplotlib
Tools: SQL Server, Leaflet, REST APIs, Git & GitHub, Docker, Render
Spoken: English, French (professional working proficiency), Punjabi, Hindi
